# Temperature Controlled Packaging Solutions

At TPC, we meet the strict demands of shipping food, medicine and temperature-sensitive materials. This includes products that must be kept at room temperature and those that must be protected from cold and heat.

## Thermal Insulated Shippers

Thermal insulated shippers, EPS coolers, mailers, and box liners; temperature-controlled thermal packaging that combines with gel packs or dry ice as needed.

# Gel Pack and Brick Refrigerants

Gel refrigerant packs are durable, reusable long lasting polymer ice packs that provide temperature sensitive protection for the safe transport of food, pharmaceuticals, and medical products.

*Semi rigid foam bricks maintain their shape during freezing, thawing, and transit.*

# Pallet Shippers

Temperature-controlled pallet shippers will deliver your temperature-sensitive goods without spoilage, damage, or loss of value.

# Insulated Pallet Covers

Insulated pallet covers are a cost-effective solution for protecting product from moisture and shipments in a trailer with a thermostat set for frozen temperatures that impact refrigerated pallets or pallet shipments of frozen product in a non-refrigerated trailer.

# Temperature Indicators

Temperature monitoring and measuring devices help identify temperature-related events and empowers you to take action to reduce the likelihood of product damage.

## Temperature Monitors

Once attached to the shipment, the SpotBot BLE measures and records temperature, humidity, tilt, and shock; the data is visualized through a mobile application.

## Cold Temperature Tapes

We have carton sealing tape capable of withstanding temperatures to  $-40^{\circ}\text{F}$ .

# Cold Temperature Stretch Film

Cold temperature stretch films won't lose their cling or load containment in cold temperatures.
